Many of these stations have been designed as an assessment tool for the objectives of the new curriculum. However, teachers may choose to use these as introductory activities, practise activities or centre activities.
These stations lend themselves well to the adaptive dimension of the Core Curriculum. See The Adaptive Dimension in the Core Curriculum available in all schools. The document can be ordered from the Book Bureau (\#1655). Changes can be made to the context or to the level of difficulty to adapt to the individual needs in your classroom.

Similar stations can be created by using activities from textbooks and other resources.
Binders that accompany manipulatives are an excellent source of ready-made activities.

| Name | Distributor | Where to Order | Order \# | Cost |
| :---: | :---: | :---: | :---: | :---: |
| Pattern Blocks <br> Activities for the Intermediate (Active Learning Series) | Exclusive Grades | Book Bureau | 7191 | \$32.60 |

NOTE: Check Addison-Wesley catalogues for ready-made job cards for many of the manipulatives including geoblocks. Exclusive also produces new binders every year. The Book Bureau will soon stock many of these resources. They are often cheaper there and there are no shipping charges.

## Getting ready . . .

## STATIONS: 9, 10, 11, 12, 14, 19, 22, 24

## Station \# 2

Station \# 3

Station \# 4 Students should recognise that these polygons are all quadrilaterals. One polygon, " $B$ " is concave while the others are convex. They should also make the distinction between F and G and between H and I. " F " is an isosceles trapezoid, " H " is a kite, and " I " is a rhombus.

Station \# 5 Copy the triangles that are provided with the station onto manila tag or cardboard. Foam board available at office supple stores also works well. Make the triangles for the first activity a different color from the triangles in the second activity to facilitate sorting.

Station \# 6 Plastic pentominoes are available commercially. A pattern is available for you to copy on manila tag for students to cut out. Have students store their sets individually in envelopes. You can also cut these from foam board available at office supply stores.

Station \# 7 This is an excellent method to show students the concept of scale drawings. The machines usually use percentage.

Trace the figure in a new area by sliding the knot on the rubber band along the original figure.

| Station \#10 | See station 2 for ideas about protractors. |
| :--- | :--- | :--- |
| Station \# 15 | 3-D shapes are available commercially both in wood and in plastic. When <br> purchasing consider sets such as the set from Addison-Wesley because these <br> open and students can use them for volume, surface ares and capacity experiments. <br> It is important for students to make connections with the real world. Collect <br> boxes of different shapes (Toblerone bars, OXO cubes, etc.) The riddles on the <br> file cards can be used for quick oral math activities or in a math centre. |

Station \# 21 Provide a fairly large circle in cardboard or a plastic lid (such as a lid from an ice cream pail). It is better if the circumference of the circle does not exceed one metre.

This concept can be developed by actually using different bicycles and having students experiment and record data.

Station \# 26 For ideas about protractors see station 2 comment.
Station \# 28 Provide cylinders such as used cans of different sizes: soup cans, corn cans, large juice cans, frozen juice can, salmon cans, very large popcorn tins etc. You may even provide cylinders cut from dowels.

Station \# 29 Triangular prisms are sometimes found in science labs (used for light experiments). Wooden mouldings can be cut into workable sizes. Plastic prisms are available commercially.

Station \# 31 You can use boxes other than jelly boxes. These were suggested because of their size. They are small enough so as not to require a large number of cubes. Individual cereal boxes work well.

Station \# 32 See Station 28, 29, and 31 for ideas about cylinders and prisms.
